1752 Operating Calendar Dossier

Eighteen months of this jurisdiction's operating rhythm from 2026-11-01: **public holidays, subdivision calendars, market closures and statutory filings** — where work stops, where the calendar diverges, and the source behind every row.

Dossier 2026.11
12 editions a year · compiled from the 1752 corpus on 2026-11-06

Series 1752 Operating Calendar Dossier
This part Hong Kong (HK)
Numbering 2026.11 — year.month, continuous; a corrected issue adds r2, r3
Frequency Monthly, 12 issues a year
Medium Electronic, PDF
Identifier 1752-DOS-HK-2026.11

This edition supersedes all earlier editions. Holiday law changes, and a calendar published once a year is wrong for part of the year, so this document is compiled fresh each edition rather than revised. Where an earlier edition and this one disagree, this one is the record.

Every quantity here — each count, share and date — is computed from the corpus at build time. Nothing is transcribed by hand, so the summary, the tables and the figures cannot drift apart from one another.

Corrections and additions to **c@naisu.pro**. Rights and licensing to **l@naisu.pro**. Every address is listed in the colophon.

At a glance

The shape of Hong Kong in one page, counted from the tables that follow.

> **No scores, no ratings, no rankings.** Every figure here is a count taken from data inside this document. Nothing on this page assesses a jurisdiction, its government or its institutions.

27
NATIONAL CLOSURE DATES

0
DATES CLOSING PART OF THE COUNTRY

77
LONGEST RUN, NO NATIONAL CLOSURE

0/0
SUBDIVISIONS WITH OWN DATES

> **Where these dates come from**
>
> All 27 dated closures are drawn from the instrument itself — the gazette, statute or order — retrieved and read, across 3 named sources. Every row names its own source in the tables that follow, and a row that gains an instrument says so in *What changed*.

Busiest by total closures, national and subdivision together: **January 2028** 4 · **April 2028** 4 · **February 2027** 3. The longest stretch carrying **no national closure** runs **77 days**, 09 October 2027 to 24 December 2027.

Reckoned on: Chinese lunisolar, Gregorian, Gregorian computus (Western), Solar term. A date **set by decree** is announced rather than computed, so it cannot appear until it is announced.

What this is

This dossier maps the operating rhythm of Hong Kong over the next eighteen months, edition 2026.11: when institutions close, where the calendar diverges from one subdivision to the next, which dates are still to be announced, and the source behind each one.

Questions this dossier answers

When does the country stop, which subdivisions keep their own calendar, which dates are not yet fixed, which months are dense and which runs are clear? Each has a section, and they can be read in any order.

What changed tells you whether anything moved since last month — if nothing did, it says so plainly. **At a glance** is the whole jurisdiction in one page of counts. **The next 18 months** summarises the window — what is coming next, where the closures cluster and where the clear runs are — without repeating a single date from the tables. After that the dossier goes layer by layer: the national calendar, then each subdivision that keeps its own dates, then religious observance, markets and filings.

Provenance, near the back, names every source and the date it was retrieved. It is the section worth checking first if you are deciding whether to trust the rest.

WHY THERE IS A NEW EDITION EVERY MONTH

Calendars drift. Governments revise dates, markets announce closures, religious authorities confirm observances after sighting, and subdivisions change their own

rules. This edition is a statement of what is known on the day it was compiled, and it is rebuilt every month for that reason — an edition is a position, not a publication.

WHAT IT IS NOT

It is not a forecast and it is not advice. Dates that depend on a sighting or a government announcement are marked, and they can move after this edition is published.

How this document works

Why it is republished every month

Holiday law changes. Governments announce substitute days, move a national day, or cancel one outright, and they rarely do it a year ahead. A calendar published once a year is therefore wrong for part of the year and gives no sign of it. So this dossier is compiled fresh every month from the underlying corpus and reissued — 12 editions a year, each superseding the last.

Every edition covers a rolling eighteen months from its own month. Edition 2026.11 covers the eighteen months beginning that month, not a calendar year, so an edition opened in November is worth exactly as much as one opened in January.

Found something wrong? Tell us.

A wrong date is not the real failure — reprinting it for a year is. If a date here does not match what your own office observes, or the source we name is not the one you would cite, write to **c@naisu.pro** with the country and the date. Corrections go into the next edition, which is never more than a month away, and appear under *What changed* so you can see they landed.

WHAT A STANDING ORDER GETS YOU

The newest edition, every month, for as long as it runs. A dossier bought once carries twelve months of editions and then stops at whichever edition was current when it lapsed — that edition stays yours permanently. Nobody is ever downgraded to an older edition than the one they last had a right to.

WHERE THE DATES COME FROM

Every row is either computed from a published rule or carried from an official notice, and each row states which. Nothing is asserted without an underlying rule or source. Every row carries an evidence tier, printed beside it rather than claimed in the preface. The tier says what the row rests on, not how confident we feel:

■ Authority-sourced	The instrument itself was retrieved and read — a gazette, a statute, a ministerial order — and it is named in Provenance.
▣ Multiple	

sources	Two or more independent sources state the same thing, none of them the instrument.
▣ Single official source	One official document names it, without a second to agree with it.
☐ Secondary source	A calendar reference rather than the instrument. A real source, and not the law.

Tier 1 outranks Tier 2 while naming fewer sources, and the reason is worth stating: the gazette is the instrument. A university, a law firm and three newspapers reporting a holiday are legitimate and are still not the document that created it.

We publish the spread for exactly this reason: a jurisdiction where most rows sit at Tier 4 is a jurisdiction where the published law was hard to reach, and you should know that before you rely on it, not afterwards.

METHODOLOGY

The full methodology — the evidence tiers, what counts as a primary source for each kind of date, and how substitution rules are modelled — is published at 1752.io/methodology. The same data is available through the Calendar API if you would rather compute against it than read it.

What changed

Compared against edition 2026-11. Only the dated rows are compared; wording and layout changes are not listed.

Nothing changed this month. Every date, rule and source in this dossier is identical to the previous edition. That is a result, not an omission — it is stated so that a reader never has to diff two PDFs to find out.

Document control

This dossier is generated from a structured corpus rather than authored as prose. Every row is computed from a rule or carried from an official notice, and every row names the source it rests on — nothing is asserted here without a rule or a source behind it.

What is in it

LAYER	SOURCE	METHOD	ASSURANCE
Public holidays	1752 observance corpus	Computed from statutory rules; evidence tier stated per row	● 27/27 at Tier 1
Market calendar	Exchange rulebooks	1 venue(s) modelled	● Computed
Statutory filings	National tax authority	6 deadline(s)	● Computed
Announcements	Official notices	2 in window	● As announced

HOW THIS JURISDICTION SETS ITS DATES

Partly announced — some dates are set by notice each year and are not knowable far in advance.

IDENTIFICATION

Dossier	`1752-DOS-HK-2026.11`
Jurisdiction	`HK · Hong Kong`
Coverage	`2026-11-01 → 2028-04-30`
Edition	`2026.11`
Reissued	`Monthly`

Licence	**Single organisation, internal use**
Licensed copy	**Stamped at download**

Licensed to the purchasing organisation for internal use. Each downloaded copy carries an order reference in the foot of every page; that reference identifies the licence to us and to nobody else, which is why it is a reference rather than a name or an address. Rules can change after the edition date; the edition above is the authoritative snapshot. Where a date depends on a sighting or a decree it is marked as such and may move.

The next 18 months

27

EVERYTHING SHUTS

The first figure is **national** — it closes the whole country. The figure after the plus sign counts closures that apply to **one subdivision only**, and a single date may appear in several of them.

A summary of the window, 2026-11-01 to 2028-04-30. Every date is listed in full in the sections that follow; this page is for the shape of it.

The next closures

DATE	OBSERVANCE	WHERE	EFFECT
2026-12-25	Christmas Day	National	●
2026-12-26	Boxing Day	National	●
2027-01-01	New Year's Day	National	●
2027-02-06	Chinese New Year Day 1	National	●

2027-03-26	Good Friday	National	●
2027-03-27	The day following Good Friday	National	●

WHERE THE WINDOW CLUSTERS

national — the whole country stops

subdivision only — somewhere in it stops

unused, scaled to the busiest month

A month with a long light bar is busy *somewhere*, not everywhere. The number on the right reads national first, then the subdivision count after the plus.

Busiest month **January 2028** (4 national, 0 subdivision); quietest **November 2026** (0 national, 0 subdivision). The longest run with **nothing closed nationally** is 78 days, 2027-10-08 to 2027-12-25.

Public holidays

The national calendar: 27 dated closure(s) in the window, with the calendar system each date is reckoned on. The legend for both marks is at the foot of every page.

Religious observance

2 tradition(s) tracked, each on its own calendar. A date here is not automatically a public holiday: where the entitlement belongs to observants rather than to everyone, the effect mark says so. Where one date is kept by several subdivisions it is **one row**, with the places listed — not the same row repeated.

Reference calendars

Dates from calendars that are **not** the civil calendar of this jurisdiction. They do **not** close anything here. They are listed because they move staff, customers and counterparties regardless of whether the state recognises them, and a dossier that omitted them would be silent about a predictable absence.

Islamic calendar (Hijri)

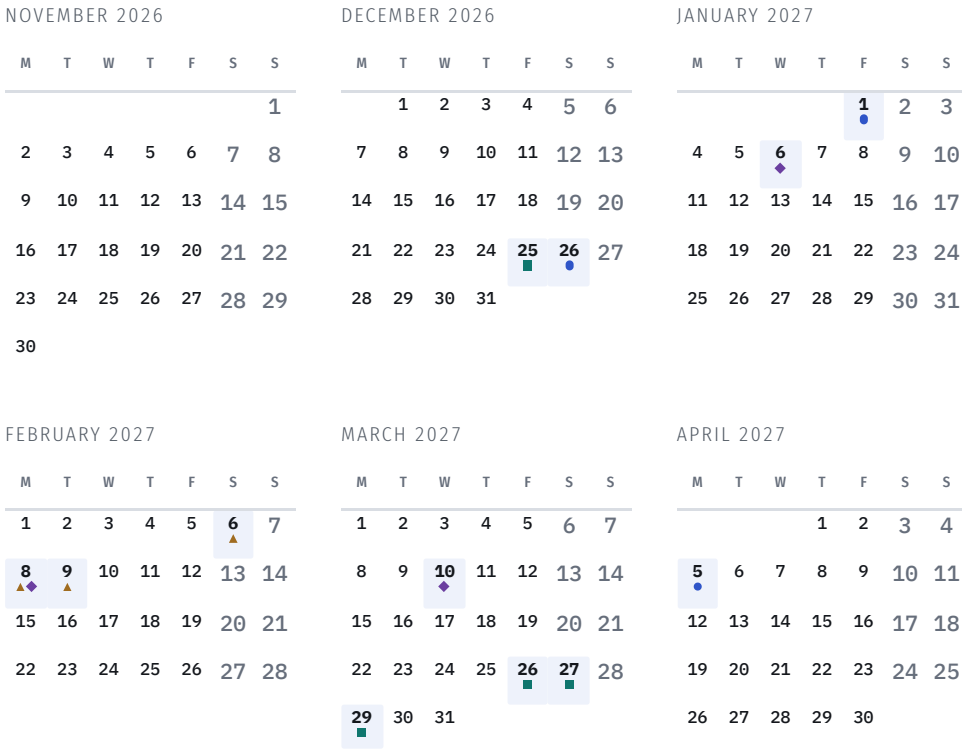

GREGORIAN	OBSERVANCE	HIJRI DATE	PRECISION
2027-01-06	Isra and Miraj	27 Rajab	Estimate
2027-02-08	First of Ramadan	1 Ramadan	Estimate
2027-03-10	Eid al-Fitr	1 Shawwal	Estimate
2027-05-16	Day of Arafa	9 Dhu al-Hijjah	Estimate
2027-05-17	Eid al-Adha	10 Dhu al-Hijjah	Estimate
2027-06-06	Islamic New Year	1 Muharram	Estimate
2027-06-15	Ashura	10 Muharram	Estimate
2027-08-15	Mawlid al-Nabi	12 Rabi al-Awwal	Estimate
2028-01-28	First of Ramadan	1 Ramadan	Estimate
2028-02-27	Eid al-Fitr	1 Shawwal	Estimate

These are estimates. The Hijri month opens on sighting, and the authority that declares it differs by country, so a date here can move by a day in either direction and occasionally by two. Other calendar systems, including Hebrew, Persian and the East Asian lunisolar calendars, are available through the Calendar API.

The 18 months in view

Every calendar in this dossier laid over the full eighteen months. A day carrying something is tinted and marked; the mark says which calendar. Weekends are greyed. This is for seeing the shape of the window — where the clusters and the clear runs are; the tables above are for looking a date up.

The colours are labels, not symbols. They are assigned in order of size from a colourblind-safe sequence and carry no meaning of their own — no colour here is intended to represent any tradition. Each mark has a distinct shape as well, so the sheet reads the same in greyscale. A day may carry more than one mark, and a mark means a calendar has an entry that day, not that everything closes.

School terms and breaks

The school year as the education authority publishes it. A school break closes no office and it empties one anyway — attendance, travel demand and the availability of anyone with children all move with it.

DATES	WHAT	APPLIES TO
2026-09-01 to 2027-07-08	School year	Term
2026-12-24 to 2027-01-03	Christmas and New Year holidays	Break
2027-01-21 to 2027-01-26	First term examination	Examinations
2027-02-04 to 2027-02-14	Lunar New Year holidays	Break
2027-03-24 to 2027-03-31	Easter holiday	Break
2027-07-09 to 2027-08-31	Summer vacation	Break

Levels held: lower secondary, preschool, primary, upper secondary. Where a jurisdiction publishes one calendar for every level, the dates below are shared.

Published by the education authority named in the record. Dates are the authority's own; where a calendar is published as a span this document does not narrow it.

Market calendar

Trading days, half-days and settlement gaps for every venue modelled in this jurisdiction. A market closure is not always a public holiday and a public holiday is not always a market closure — both are listed.

STATUTORY FILINGS

FILING	FREQUENCY	APPLIES TO	TIMING
Corporate income tax return	annual	corporations	**Not a fixed date.** Set each year by decree. The 2025/26 profits tax returns were issued on 1 April 2026 and must be filed within one month, i.e. by 4 May 2026 because 1 May 2026 is a public holiday. Where a tax representative is appointed the Block Extension Scheme extends the date by accounting-date code (D code 31 August 2026, M code 30 November 2026, loss cases 1 February 2027), with a further month for electronic filing; a Part 4AA entity subject to mandatory electronic filing also gets a further month.
Corporate income tax, final payment	annual	corporations	**Not a fixed date.** Set each year by decree. The Inland Revenue Ordinance provides that the tax is paid on the date specified in the notice of assessment, not on a calendar date the Department publishes; the demand note prints that date (and, where the tax is billed in two instalments, the dates of both). The rule is therefore recorded as decree with no dates, because the date is set per notice and

			the Department publishes no calendar rule.
Corporate income tax, instalments	annual	corporations	**Not a fixed date.** Set each year by decree. Provisional profits tax is billed with the profits tax assessment and is payable on the dates printed on that notice; where it is payable in two instalments, the second becomes due immediately if the first is missed. No calendar date is published, so rule_type is decree with no dates.
Personal income tax return	annual	individuals	**Not a fixed date.** Set each year by decree. The 2025/26 individual returns were issued on 4 May 2026 and are due within one month, on or before 4 June 2026; the Department's page states the date itself.

			decree with no dates so a consumer reads the notice.
Personal income tax, instalments	annual	individuals	**Not a fixed date.** Set each year by decree. Provisional salaries tax is demanded in the same notice of assessment and is payable on the dates printed there, usually two instalments; the second becomes due immediately if the first is missed. No calendar date is published, so rule_type is decree with no dates.

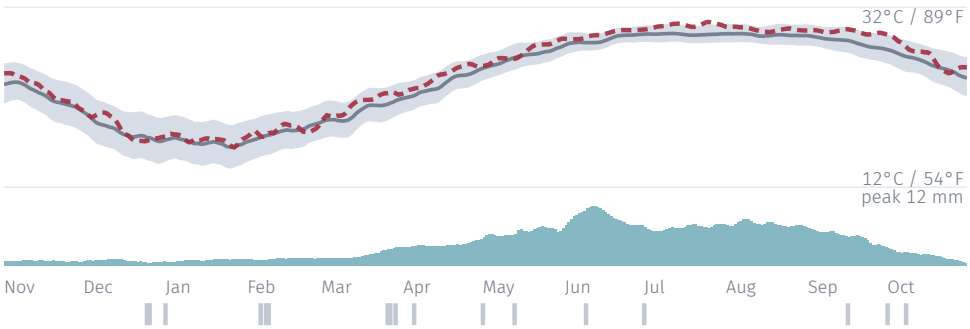

Where the timing is computed rather than fixed, confirm the day against the authority for the period you are filing.

Seasonal rhythm

The typical shape of a year in Hong Kong, computed from **4 reanalysis grid cells** across the country.

> **Why this matters.** A date on its own tells you an office is shut. It does not tell you whether that closure falls in the wet season, the dark months or the hot ones — which is what decides whether a launch, a site visit, an outdoor event or a shipping route is affected by more than the closure itself. This page is the backdrop the calendar sits in. It is context, not a factor in the dates.

Figure 1 · The weather year, and where the closures fall in it

What this is, and what it is not

This is a record, not a prediction. Every value is an average of weather that actually happened, on that day of the year, across 4 reanalysis grid cells. It says what is *typical*. It does not say what will happen, and no day in it is a forecast.

A country is not a climate. Averaging Hong Kong into one line flattens real differences — mountains against coast, north against south — so this page is a **rhythm**: the shape of the seasons, the position of the wet months, the run of the hot ones. Where a subdivision keeps its own dates it also gets its own chart on the pages that follow, which is where the differences show.

Both lines are the **daily mean temperature**, so the gap between them is the shift. Twelve months, not eighteen: a normal repeats yearly. The 2021–2025 mean is five years deep — enough for a shift in the mean, not for anything about extremes. A grid cell is about 50 km across, so places that share one are

1991–2020 normal, daily low to high — 1991–2020 mean
---- 2021–2025 mean precipitation closure, national closure, subdivision

counted once. Source: NASA POWER daily data (MERRA-2 reanalysis), NASA Langley Research Center (LaRC) POWER Project, CC BY 4.0, retrieved July 2026; daily records from 1981.

1991–2020 normal, daily low to high — 1991–2020 mean
---- 2021–2025 mean precipitation closure, national closure, subdivision

Time zone

Hong Kong observes UTC+8 and does not keep summer time.

When it is 09:00 here

The local time in nine cities across the working world. Where summer time applies on one side only, both figures are given.

CITY	LOCAL TIME
Los Angeles	(−1 day) **17:00** winter · **18:00** summer
New York	(−1 day) **20:00** winter · **21:00** summer
São Paulo	(−1 day) **22:00**
London	**01:00** winter · **02:00** summer
Dubai	**05:00**
Mumbai	**06:30**
Tokyo	**10:00**
Sydney	**12:00** winter · **11:00** summer

Computed from the IANA time zone database for 2026. Offsets are the zone's, not a city's: a city adopts whatever its zone does. Dates elsewhere in this dossier are civil dates in this jurisdiction and are never shifted.

Working days

How many days are actually available to work, month by month, under three different working weeks. **These are assumptions, not claims about this country.**

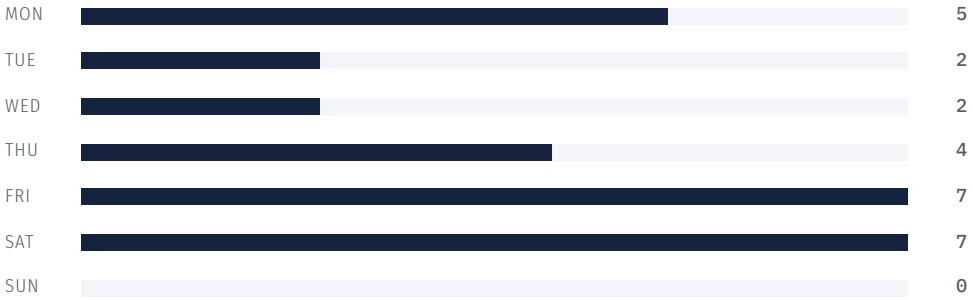

MONTH	CLOSURES	5-DAY WEEK	6-DAY WEEK	7-DAY WEEK

Mar 2028		23	27	31
Apr 2028	4	17	21	26

Five-day counts Monday to Friday, six-day counts Monday to Saturday, seven-day counts every day. Closures falling on a day the pattern already excludes cost nothing.

Which weekday the closures fall on

National closures only, across the whole window. Given so that a reader whose week is not Monday-to-Friday can work out their own figure — a Sunday-to-Thursday operation loses nothing to a Friday closure

and everything to a Sunday one, and no single column above can say that for them.

7 of 27 national closures fall on a Saturday or Sunday, so a Monday-to-Friday operation loses **20** of them and a seven-day operation loses all 27. That gap is the single largest reason two companies in the same country count their year differently.

By ISO week

Every ISO week in the window and nothing but the count of closures in it — national and subdivision together. Manufacturing, shift planning and delivery promises are all written in ISO weeks, and a week with nothing in it is as useful to know as a week with three.

79 weeks. A week is counted Monday to Sunday under ISO 8601, so the first and last may extend a little beyond the window. Any closure anywhere in the jurisdiction counts once.

Settlement

The days money does not move. **This is not the same list as the days shops are shut** — a bank closure can fall on an ordinary working day, and a public holiday does not always close the banking system. Both are given separately because an instruction that misses a value date costs something and a closed shop does not.

Bank closures

No day in this window closes banks without also closing everything else. Where that is so, the general closure list is the settlement list.

MARKET AND EXCHANGE CLOSURES

What this section does not yet cover. Payment systems are not modelled: TARGET2, CHAPS, Fedwire, CHIPS and SEPA keep their own calendars, and a euro instruction can fail on a day no country in the euro area treats as a holiday. Nor are value-date cut-off times. Both are on the roadmap and neither should be inferred from this page.

The pattern nearby

The same twelve months for every jurisdiction in **Eastern Asia**, the region containing Hong Kong. National closures only, no dates named, nothing but the shape.

This page answers what a single-country document cannot: when the whole region stops at once, and when it is collectively clear. Grouping is geographic and carries no other meaning.

Figure 2 · The same window in neighbouring markets

7 jurisdictions besides Hong Kong. The top row is Hong Kong itself, for comparison.

Calendar systems

The systems these dates are reckoned on — not just the dates. Where a system depends on observation or announcement, a date computed far ahead is an estimate and is marked as such in the tables above.

Chinese lunisolar

10 DATE(S)

Lunisolar; the date is exact but the working-day arrangement around it is announced annually.

Gregorian

9 DATE(S)

Computed from the rule; exact for any year.

Gregorian computus (Western)

6 DATE(S)

Western computus.

Solar term

2 DATE(S)

Computed from the rule; exact for any year.

Electoral rhythm

When this jurisdiction has gone to the polls, how regularly, and what is announced next.

> **These are not closures.** Whether polling day shuts a country is a matter of national law and varies enormously. Nothing on this page is evidence that anything closes; the closure record is in the tables earlier in this dossier.

> Every future date is a **draft**. Elections are announced, not enacted — dates move, polls are postponed, and results are occasionally annulled and re-run. Hollow marks are announced; dashed marks are dates the source itself will not confirm.

The record

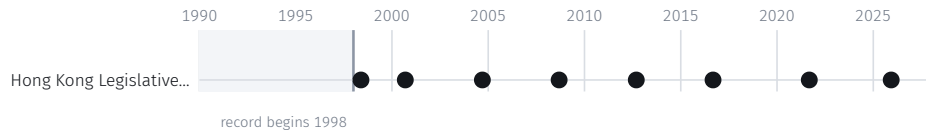

SHAPE — WHICH BODY

2025 • Dec

Dates compiled by IFES ElectionGuide from what electoral bodies publish, read November 2026. A compiler's reading of what commissions publish, not the commission's own notice — Tier 4.

Operating conditions

When this market is predictably full rather than predictably shut.

> **Nothing on this page closes anything.** A closure is a legal fact and lives in the tables earlier in this dossier. A condition is not: the offices are open, the banks are open, and the beds, the roads and the trains are full. Where a condition coincides with a public holiday the two are recorded separately, in separate layers, because they are two different facts about the same day and only one of them is the law.

> **How this section is sourced, and why it differs.** All 6 conditions here rest on a named source, but no instrument was retrieved to confirm them. The closure record in this dossier rests on gazettes, statutes and government notices, which are published once and archived. Conditions rest on a different set of authorities — a transport operator's service notice, a city's event permit, a police traffic plan — and those are typically published for one weekend and taken down.
>
> **Expect the operating conditions section to receive more frequent updates than the rest of the dossier.** Coverage is still being added, and a date announced by an organiser replaces an estimate the month it is announced. The closure record changes when a law changes; this changes whenever anyone publishes anything.

---

6 conditions recorded for this market: 6 hosted here. **None** are dated inside this eighteen-month window; they recur, but no edition has been placed in it. The record behind them runs from **2025** to **2026**, 6 dated editions in all.

Recurring conditions and when they usually fall

These recur in this market on a known rhythm, without a confirmed date inside the published window — either the organiser has not announced it yet, or the only date available rested on a compilation, and a forward date is held to a higher bar than that. **A window shown in figures is empirical, not a forecast**: it is where the start date has actually fallen across the editions on record. A window shown in words is the source's own statement of when the thing happens.

Past editions are compiled from published summaries, and the trade is deliberate: a past date that is wrong misleads nobody, a future one books a hotel in the wrong fortnight — so forward dates are held to the instrument and these are not. The record is not guaranteed complete either, so read the edition count as the strength of the statement rather than as a total.

CONDITION	WHERE	USUAL WINDOW	ON THE RECORD
Lunar New Year travel peak	Hong Kong, Hong Kong Special Administrative Region	not stated	1 edition spanning 1 × February
National Day Golden Week mainland influx	HK	Mainland National Day holiday; the 2025 window is 1-8 October AS STATED	1 edition spanning 1 × October
Christmas/New Year cross-boundary peak	HK	The Christmas long weekend; 2025 window 24-28 December AS STATED	1 edition spanning 1 × December
Summer cross-boundary peak	HK	not stated	no dated edition on record
Victoria Harbour fireworks displays	Victoria Harbour, Hong Kong Island and Tsim Sha Tsui, Kowloon	not stated	2 editions spanning 1 × October 1 × February
Hong Kong Marathon	Tsim Sha Tsui to Victoria Park, Hong Kong Island and Kowloon	2026 edition Sunday 18 January per the Transport Department AS STATED	1 edition spanning 1 × January

NATIONAL DAY GOLDEN WEEK MAINLAND INFLUX

Annual · HK · Civic

CHANNEL	BAND	WHAT THAT RESTS ON
Rail	HIGH	TD: MTR East Rail Line enhancement between Admiralty and Lo Wu/Lok Ma Chau for 1-8 Oct.
Road	HIGH	TD: possible special traffic arrangements at Lok Ma Chau and Shenzhen Bay; cross-boundary private cars may queue.
Sea	HIGH	TD: HZMB Gold Bus increased to ~1-minute peak frequency; Lok Ma Chau-Huanggang Yellow Bus ~2 minutes; higher B-route frequencies.

No attendance figure is recorded. Not established — the TD release gives no passenger count.

Source named; no instrument read. Sources: hk-td, hk-immd.

CHRISTMAS/NEW YEAR CROSS-BOUNDARY PEAK

Annual · HK · Cultural

CHANNEL	BAND	WHAT THAT RESTS ON
Rail	HIGH	TD: MTR East Rail Line enhancement between Admiralty and Lo Wu/Lok Ma Chau for 24-28 Dec.
Road	HIGH	TD: possible special traffic arrangements at Lok Ma Chau and Shenzhen Bay; longer anticipated waiting times.
Sea	HIGH	TD: Gold Bus ~1-minute and Yellow Bus ~2-minute peak frequencies if needed.

No attendance figure is recorded. Not established — no count in the TD release.

Source named; no instrument read. Sources: hk-td, hk-immd.

SUMMER CROSS-BOUNDARY PEAK

Annual · HK · Civic

CHANNEL	BAND	WHAT THAT RESTS ON
Transit	HIGH	ImmD daily series: weekend total crossings exceeded 1.3 million on successive August 2026 weekends — 1,353,582 on 08-08-2026 and 1,342,940 on 09-08-2026 — against midweek totals below 1.0 million (917,184 on 04-08-2026). Computed from the series.

No attendance figure is recorded. Not a single count; peak days measured at 1,353,582 and 1,342,940 total crossings (computed from the ImmD series).

Source named; no instrument read. Sources: hk-immd.

VICTORIA HARBOUR FIREWORKS DISPLAYS

Annual · Victoria Harbour, Hong Kong Island and Tsim Sha Tsui, Kowloon · Civic

CHANNEL	BAND	WHAT THAT RESTS ON
Road	HIGH	Hong Kong Police (CNY 2026): phased closures across Central, Wan Chai, Causeway Bay and Tsim Sha Tsui.
Sea	HIGH	Marine Department (CNY 2026): Closed Area off the HKCEC 14:00-22:30 and Restricted Area in the Central Harbour 19:00-21:00; ferry services continue only until 19:40.
Transit	HIGH	Hong Kong Police: MTR station access control and one-way pedestrian flow on overcrowded footbridges and the waterfront promenade.

No attendance figure is recorded. Not established — no crowd count; ‘more than 30,000 firing shells’ is a payload count, not attendance.

Source named; no instrument read. Sources: hk-hkp, hk-md, hk-cstb.

HONG KONG MARATHON

Annual · Tsim Sha Tsui to Victoria Park, Hong Kong Island and Kowloon · Sporting

CHANNEL	BAND	WHAT THAT RESTS ON
Road	HIGH	TD: phased closures from 23:30 on 17 Jan across Tsim Sha Tsui, West Kowloon Highway, Stonecutters Bridge, Ting Kau Bridge and the Western Harbour Crossing; traffic 'more significantly congested when compared with normal Sundays'.
Transit	HIGH	TD: 220 daytime bus and 34 GMB routes suspended/truncated/diverted, 49 overnight bus + 6 GMB routes adjusted, 28 special bus routes, and MTR advanced first departures (03:25 on Tuen Ma/East Rail).

No attendance figure is recorded. Not established — no participant or spectator count in either source.

Source named; no instrument read. Sources: hk-td, hk-hkp.

LUNAR NEW YEAR TRAVEL PEAK

Moves with chinese new year day1 COMPUTED · Hong Kong, Hong Kong Special Administrative Region · Cultural · 10 days

A ten-day window rather than a three-day holiday, and the two halves point in opposite directions: outbound before, inbound during, return after. Cross-boundary freight and anything routed through Lo Wu or Lok Ma Chau should assume the crossing is the constraint. The closure dates themselves are in the observance record; this is the movement around them.

> **Movement.** Both directions at once, which no single strain band can express: the airport is extreme outbound and the land crossings are extreme inbound, on overlapping days.

CHANNEL	BAND	WHAT THAT RESTS ON
Beds	HIGH	Inbound Mainland visitor demand meets a reduced-capacity operating week, so the ordinary relationship between price and availability does not hold.
Air	HIGH	Airport Authority: >210,000 passenger trips on the CNY peak day (22 Feb 2026); 5.42M trips in February 2026 (+20.1%).
Rail	HIGH	ImmD working group: Lo Wu ~200,000/day and Lok Ma Chau Spur ~187,000/day forecast for CNY 2026 (14-23 Feb), with a joint command centre at Lo Wu and MTR East Rail enhancement.
Road	HIGH	ImmD working group: Shenzhen Bay ~156,000/day forecast; special traffic arrangements at the land control points.
Transit	MODERATE	Internal service runs a holiday timetable against a redistributed, not reduced, demand — the pressure is at the boundary crossings rather than inside the territory.

No attendance figure is recorded. The Immigration Department publishes daily arrivals and departures by control point, which is the right series and has not been pulled. Nothing is asserted in the meantime.

Source named; no instrument read. Upgraded with ImmD working-group estimate, Airport Authority and Police sources; the ImmD daily series provides the measured pull. Sources: hk-immd-passenger-statistics, hk-immd, hk-aa, hk-hkp.

This is the *conditions* layer: supporting context, never the primary answer. Conditions are graded on the same ladder as the closure record and most sit below it, because the authority for a capacity claim is the party that has to absorb the event — a transport operator, a city, a statistics office — and those are harder to retrieve than a gazette. Each band above says what it rests on.

Provenance

Every source behind this dossier, named and dated. This is the section nobody else prints: a list of dates is worth what its evidence is worth, and the evidence is here rather than on request.

Evidence summary

27	100%	■ **Authority-sourced** — the instrument itself — a gazette, statute or exchange rulebook — was retrieved and read
0	0%	⊡ **Multiple sources** — two or more independent sources state the same thing, none of them the instrument
0	0%	⊡ **Single official source** — one official document names it, without a second to agree with it
0	0%	□ **Secondary source** — a calendar reference rather than the instrument — a real source, and not the law

27 entries · 3 sources consulted. These four states are reported as they are and are never rounded upward. **Tier 4 is not unchecked** — it means the row rests on a calendar reference rather than the instrument, which is a statement about our evidence and not about the date. A tier only rises when a retrieval actually happens, so this figure moves between editions and is expected to.

■ GovHK — General holidays and statutory holidays

Primary Government of the Hong Kong Special Administrative Region Retrieved 2026-08-03 17 rows hk-gov-public-holidays

https://www.gov.hk/en/about/abouthk/holiday/

□ python-holidays 0.96

Reference python-holidays maintainers Retrieved 2026-07-12 14 rows python-holidays

https://github.com/vacanza/holidays

A source is primary when it is the instrument itself — a gazette, a statute, an exchange rulebook. Anything else supports it. A row reaches Tier 1 only once a primary source has been read and named above.

Appendices

Every date in this dossier is also supplied as data, in the same download.

FILE	CONTENTS
Hong-Kong-2026-11.csv	Every dated closure in the window: jurisdiction, date, observance, effect, calendar system, assurance and source ids. The authoritative machine-readable form — where this PDF abridges a table, the CSV does not.
Hong-Kong-2026-11.ics	**National closures only.** The safe default: it contains nothing that applies to only part of the country.
ics/Hong-Kong-all-2026-11.ics	Every jurisdiction at once. Useful for analysis, wrong for a personal calendar unless you are in all of them.

0 subdivision calendar(s), one per subdivision that keeps dates of its own. Each contains the national calendar as well, so a subscriber in one region gets a complete picture of their own days off and nothing belonging to anywhere else.

Appendix — names in local languages

Every observance in this dossier as it is written locally. The English name is our label for it; the local name is what it is called where it is kept, and what a search of a national site will actually match.

Boxing Day
圣诞节翌日 zh

Buddha's Birthday
佛诞 zh

Tuen Ng Festival
端午節 zh

Terms and limitations

What this dossier reports

We report what was published and reachable at the time this edition was compiled. Where a government had not yet announced a date, or where the instrument setting it could not be retrieved, the dossier says so in the row rather than filling the gap with an assumption.

SCOPE OF MONITORING

1752 continuously monitors **241 countries and territories** across **653 subdivisions** — 510 of which keep a date their country does not — together with 56 market venues, drawing on 1859 registered sources. The whole catalogue is recompiled and republished every month. **A month in which nothing changed is a normal result**, and this dossier states it explicitly in *What changed* rather than leaving you to compare two documents to find out.

LIMITATIONS

- Dates that depend on a lunar sighting or a discretionary government announcement are marked as estimates and may move after publication.
- Evidence tiers describe the evidence behind a row at the time of publication, not a guarantee of future accuracy.
- Subdivision coverage reflects jurisdictions that publish their own calendars. A subdivision with no separate entry follows the national calendar.
- Market sessions and settlement conventions are modelled from published rulebooks and are not a substitute for the venue's own notices.

USE AND REDISTRIBUTION

Licensed to the purchasing organisation for internal use. Redistribution of the compiled document outside that organisation is not permitted. Underlying public data remains under its own terms.

NO WARRANTY

This document is supplied for operational planning. It is not legal, employment or tax advice, and it should not be the sole basis for a decision with legal or financial consequence. Where a date matters to a contract or a filing, confirm it against the authority named in *Provenance*.

PUBLISHER

Published by Naisu Press, a trading name of Naisu Limited, a company registered in England and Wales, company number 16039918. Registered office: 71–75 Shelton Street, Covent Garden, London WC2H 9JQ. Contact: m@naisu.pro.

Figure 3	Every contest on record, by body

HOW THIS WAS MADE

Compiled from the 1752 corpus and typeset with Paged.js. The corpus holds the instrument behind each date where we have retrieved one, and names the authority behind the rest; *Provenance* lists both. The figures are drawn from the same rows as the tables, in the same pass.

Built 2026-11-06 · corpus 4f59daee19a5e9ec+modified · engine b7e1578a6b20 · press 6d9f05b6cf4f+modified · release v1.52.0
***corpus* is the content digest of the data this edition was compiled from. Quote it and we can reproduce this document exactly.**

SOURCES AND LICENCE

Dates are facts about decisions public authorities have made, and are not owned by anyone; what is ours is the finding, checking, grading and arranging of them. Every source is named in *Provenance*.

Contains public sector information licensed under the Open Government Licence v3.0 — nationalarchives.gov.uk/doc/open-government-licence/version/3/ . Material from other jurisdictions is used under the terms applicable in each.

HOW TO CITE THIS
